

DFL Dry Film Lube mold release agent No. 41112N

- FORMULATION FOR DEEP DRAW MOLDS
- More durable bonded formulation
- No ozone depleting chemicals
- Excellent for most rubber ,thermoplastics: ABS, acetyl, nylon, vinyl, PVC
- Also good on phenolic & urethane
- Contains PTFE

Dry Film Lube (DFL®) will not create ""hydraulic effect"" on deep drafted molds. Dry film will not pick up dust or dirt and remains inert when exposed to corrosive reagents. It's an excellent, fast-drying lubricant for injection molding where clarity and deep draw are important, especially with hard, brittle resins.

NOTICE TO PURCHASER: User shall determine suitability of product for his intended use and assumes all risk and liability in connection herewith.

Specs

Maximum operating temperature: 500F

No. 41112N aerosol

Net Wt. 12 oz. (16 fl. oz.).
